Installing Python 3.10 on Windows 10/11

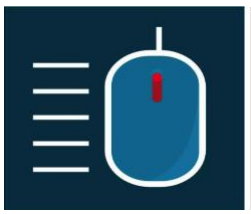

Python is a programming language that is easy to learn because of its use of indentation. The latest upgrade of Python is Python 3.10 which was released on October 4th, 2021. You can [download it from here](#)

Visit [Python releases page](#) to download python 3.10. Alternatively, you can visit the official site for [Python](#) and get it from there from the downloads section.

Click on the Python version to download

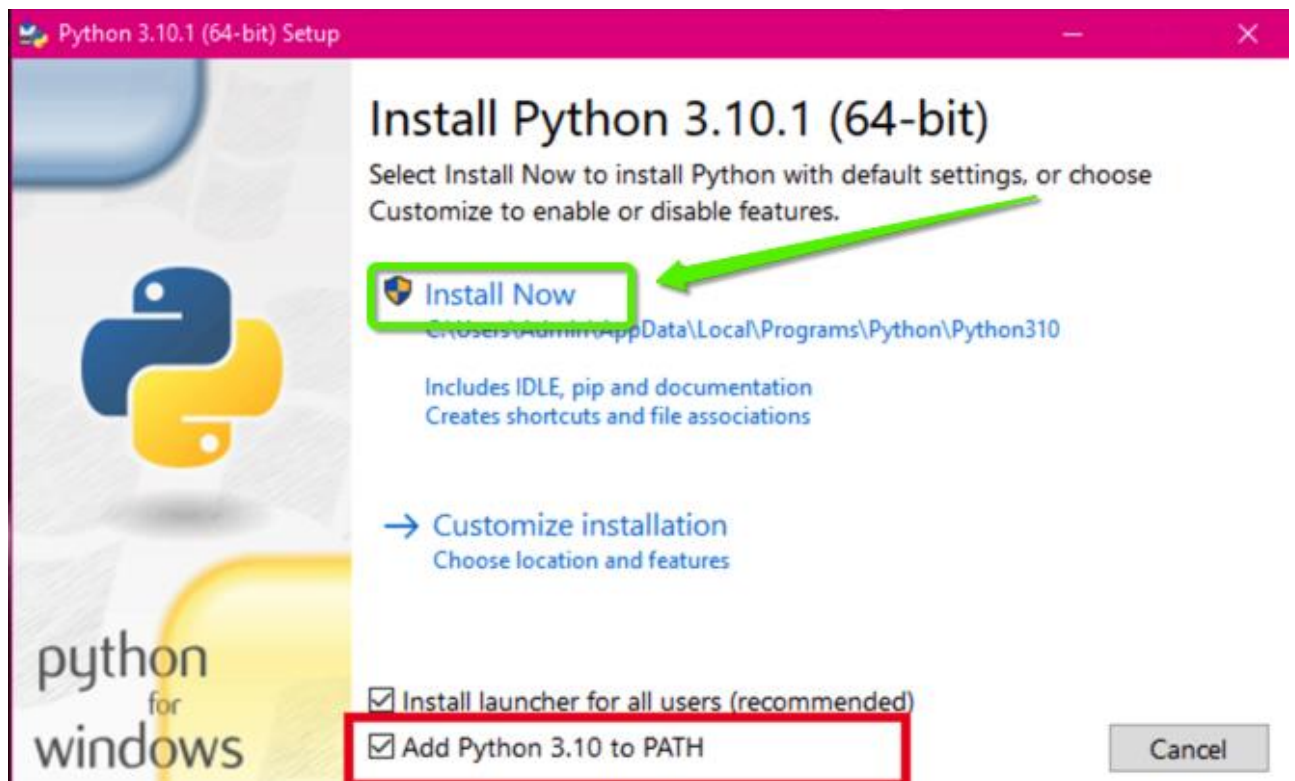

Once the download is done, Find the setup and click on it to install.

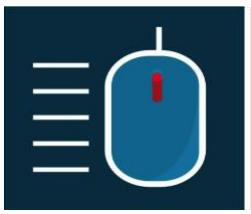

Simple Knowledge Series

The wizard opens as follows. Remember to tick the **Add to Path** checkbox, then now click on **Install Now**. You can customize the settings if you want, I normally go for the default

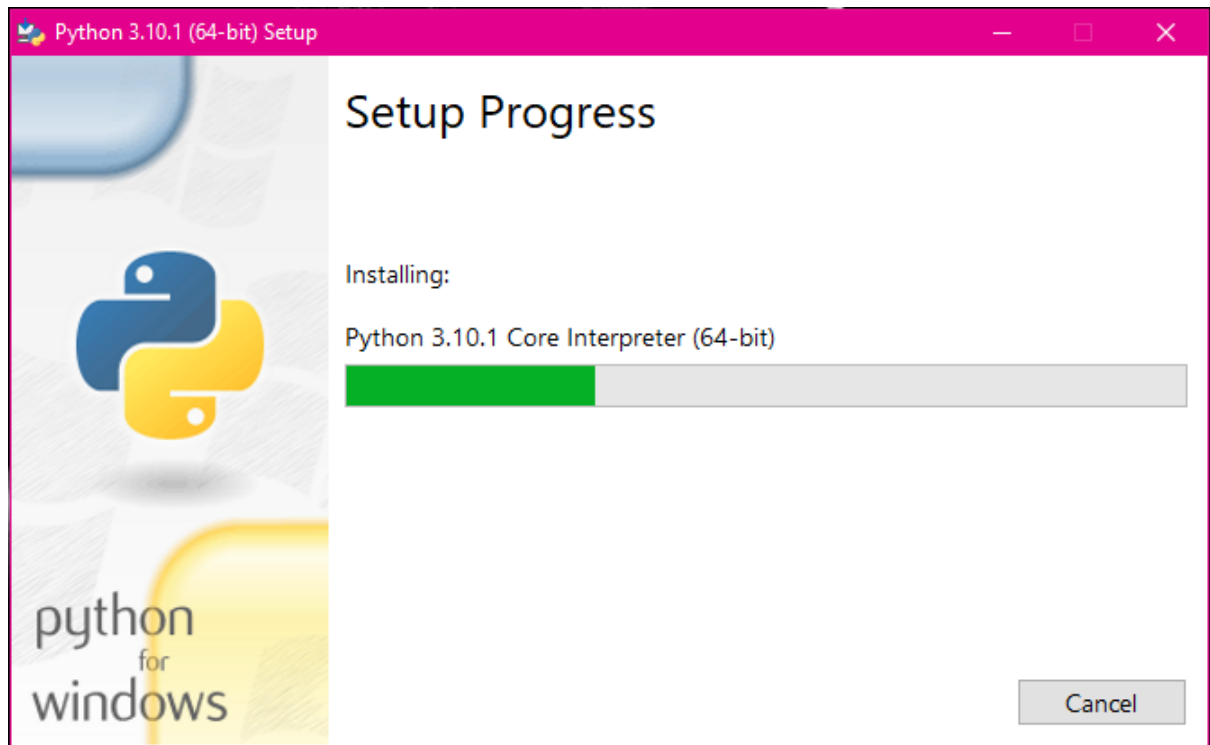

Click on Install Now to continue

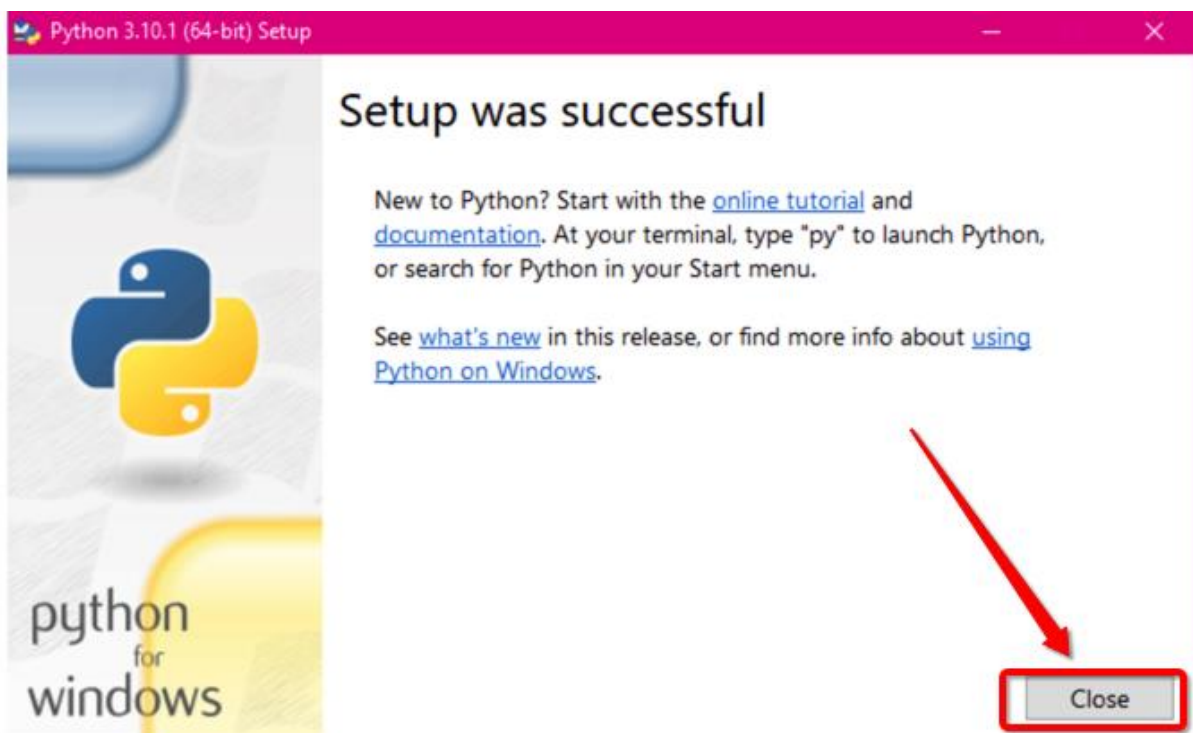

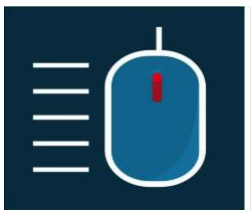

Simple Knowledge Series

Then the installation begins

The installation is successful and this window shows it. Click on "**Close**" to quit the installer.

Simple Knowledge Series

You can confirm if your python install was successful by typing `python` on the Windows search bar.

You can also use the command prompt by typing `python` as shown below

```
Command Prompt - python
